

GTS300

Drilling Rig

GTS300 Drilling Rig

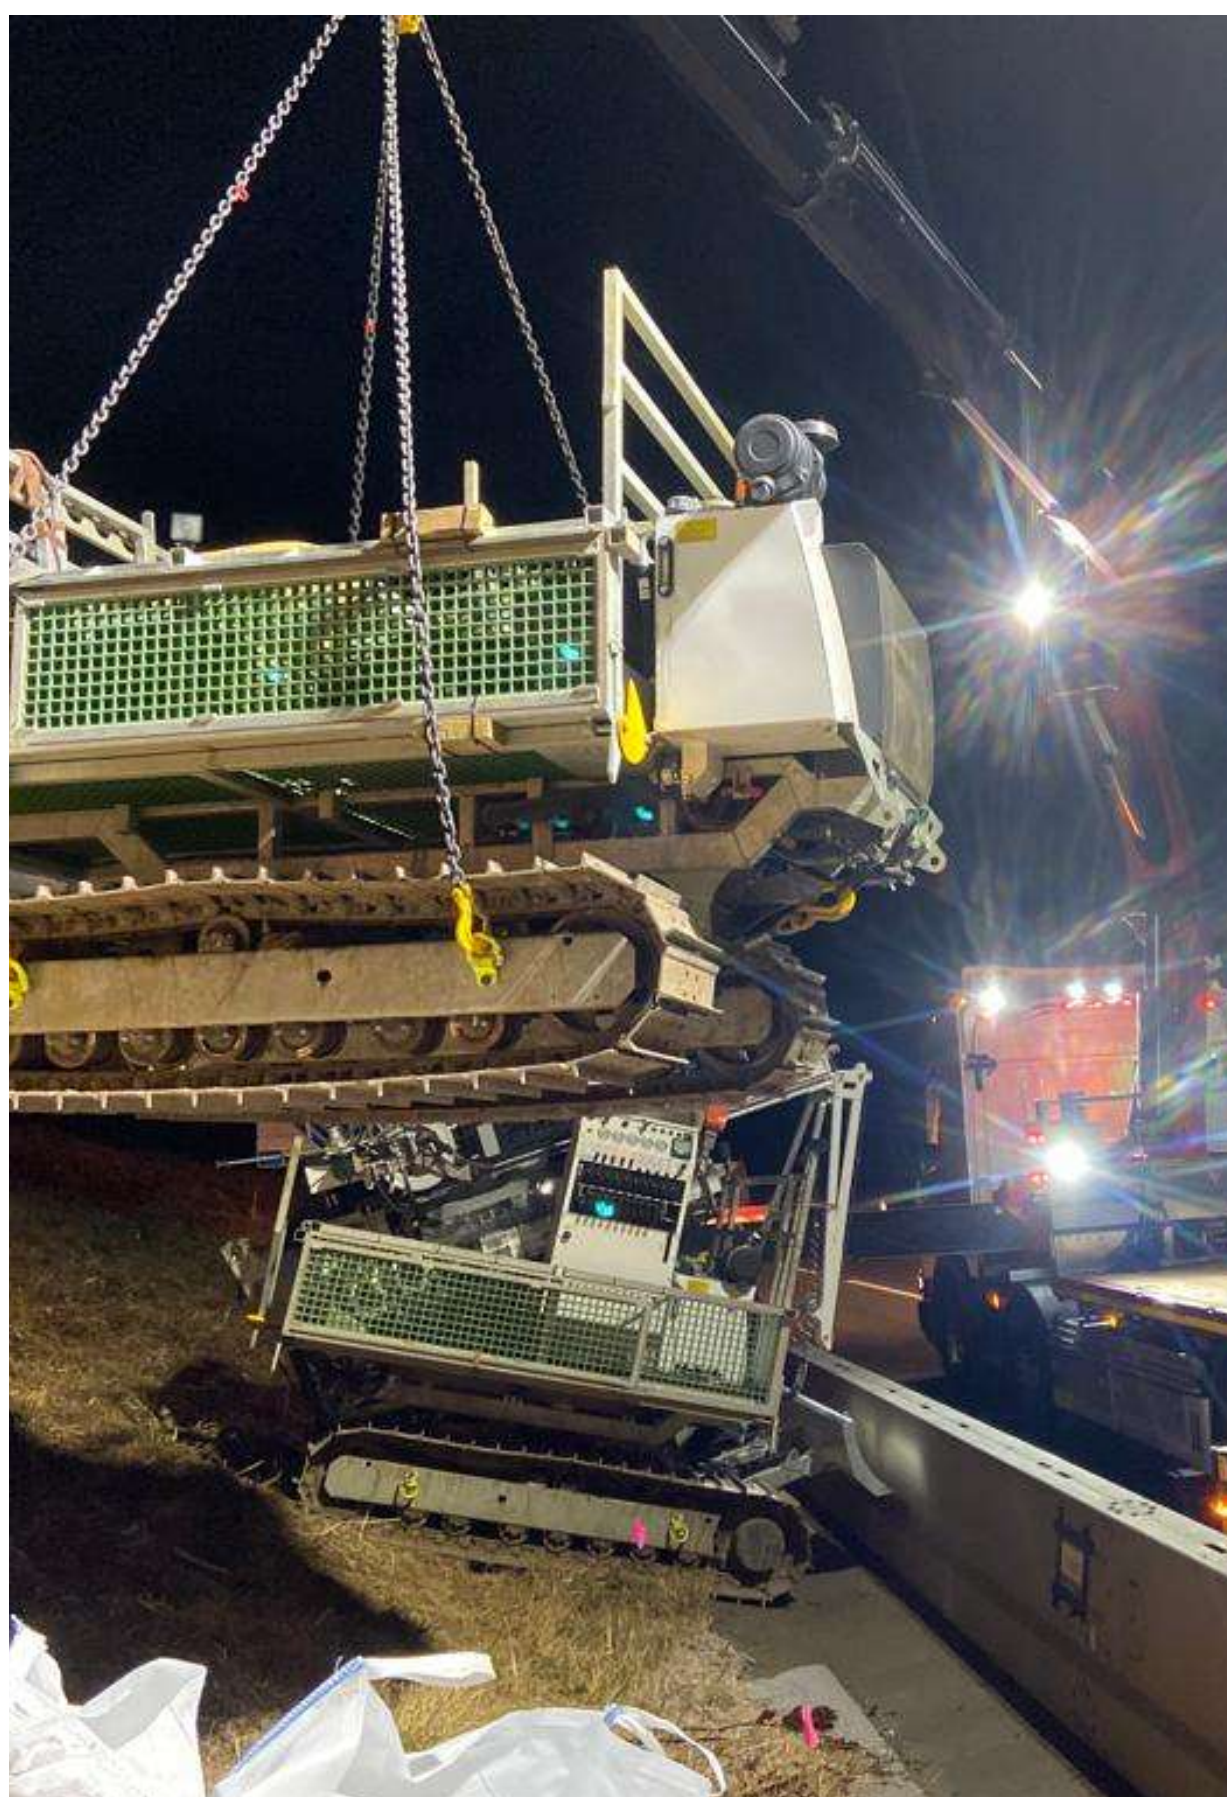

The GTS300 Drilling Rig represents the most versatile and industry-leading drilling rig available in the UK Site Investigation sector. Able to safely access and drill on 45 degree slopes as well traverse boggy terrain where it's overall bearing pressure is less than that of a human footprint, there isn't much that the GTS300 cannot do.

Fitted with a Comacchio dual-purpose dynamic sampling and rotary coring mast, similar to those found on our conventional drilling rigs, alongside an automatic SPT hammer, the GTS300 finds itself at home in a variety of situations from road or railway embankments to reservoirs and marshland.

It has the following features:

- Automatic levelling in both planes to allow safe working on side slopes and steep inclines.
- Steel tracks with single grouser pads for good ground penetration and maximum grip on steep slopes up to 45 degrees.
- A 7500kg (8.25 ton) winch for added security on critical sites.
- Radio control for remote tracking, winch operation and platform levelling.
- Fold down walkways and drilling mast for a secure level working area.
- Heavy-duty, GRP floor grating and removable handrails, kickboards and stanchions for safety.

The capabilities of the GTS300 mirror those of the Comacchio rigs, with the ability to utilise dynamic sampling methods through soft superficial deposits before switching to conventional coring methods once competent material is encountered. Similarly, the GTS300 is capable of utilising Odex casing advancement, water or air flush to achieve depths in excess of 100 metres.
